Motivation

There are many people who are passionate about cooking. They cook from their own interest , main goal of our project is to make this passion economically useful and thus empower small entrepreneurs.

Motivation

Our project also enables people to have home-made healthy food at anytime and anywhere they want at a reasonable price.

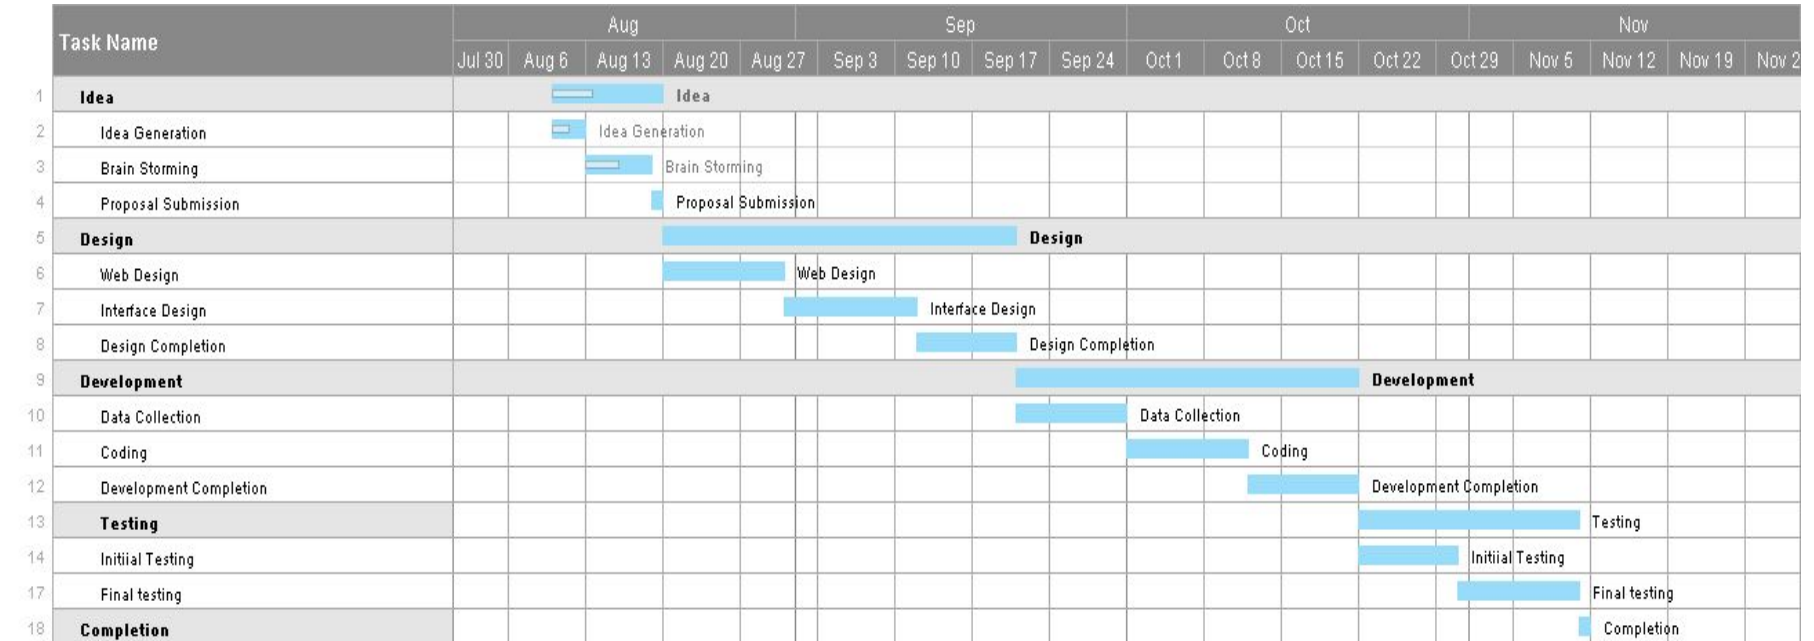

Features

- User dashboard
- Chef dashboard
- Food menu management
- Order status

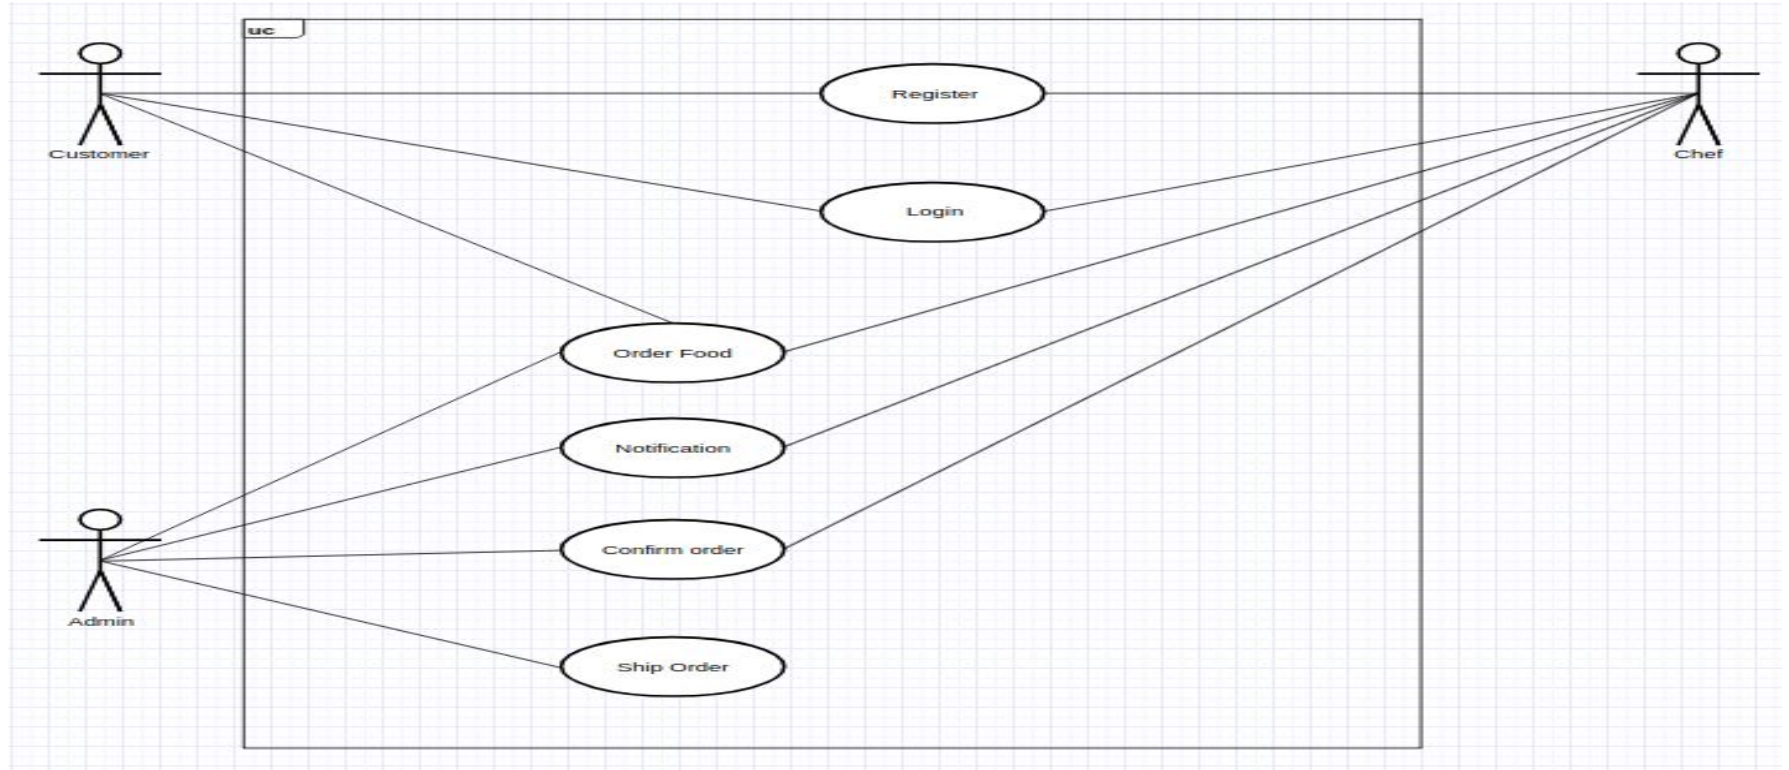

Features

- Chefs' kitchen
- Rating and review
- Payment
- Social media linkup

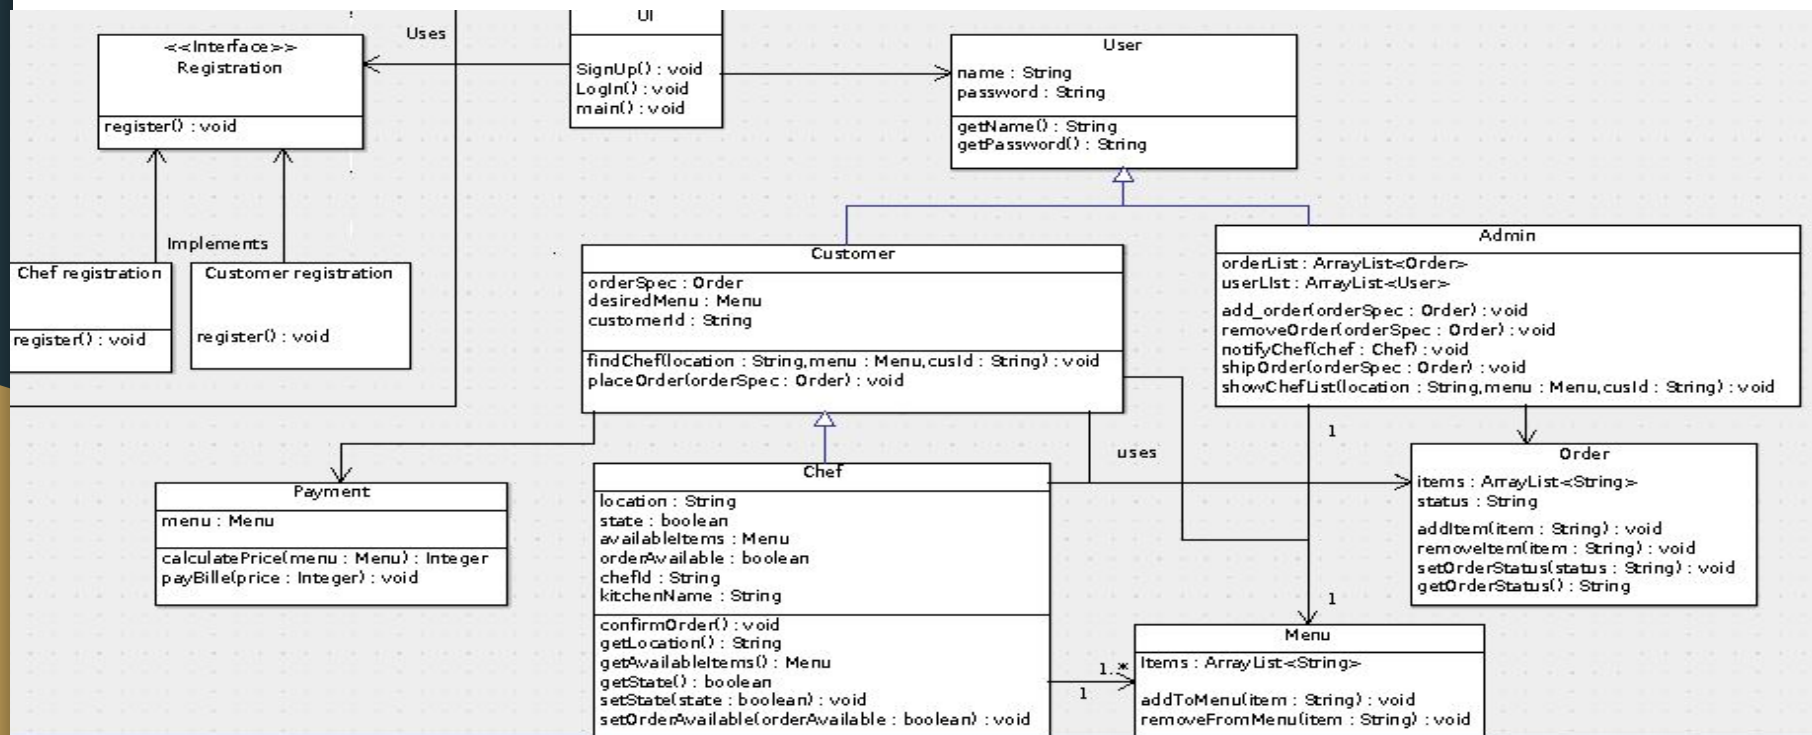

Tentative schedule

Use Case

Class diagram

Design pattern

- Strategy pattern
- Observer pattern
- Singleton pattern
- Flyweight pattern
- Chain of responsibility

Strategy pattern

We will use interface for registration process as it varies from chef to customer.

Observer pattern

When a customer will order some items then corresponding chef should be notified and the chef will confirm the order back again.

Singleton pattern

There will be only one storage unit which will be initiated at the very beginning and remain same after that.

Flyweight pattern

We will use a shared database , that means multiple user can access that at the same time.

Chain of responsibility pattern

In our project a single request can be handled by different objects.
